Description

Plain text [Preview](#)

Discard old builds

GitHub project

This project is parameterized

Throttle builds

Prepare an environment for the run

Execute concurrent builds if necessary

Advanced ▾

Connect and manage your code repository to automatically pull the latest code for your builds.

- ☐ None
- ☒ Git

Triggers

Set up automated actions that start your build based on specific events, like code changes or scheduled times.

- ☐ Trigger builds remotely (e.g., from scripts)
- ☐ Build after other projects are built

Build periodically

Schedule

```
45 23 * * *  
0 0 * * *
```

Spread load evenly by using 'H 23 * * *' rather than '45 23 * * *'

Would last have run at Saturday, August 29, 2026, 11:45:00 PM Eastern Daylight Time; would next run at Sunday, August 30, 2026, 12:00:00 AM Eastern Daylight Time.

- ☐ GitHub hook trigger for GITScm polling
- ☐ Poll SCM

Environment

Configure settings and variables that define the context in which your build runs, like credentials, paths, and global parameters.

- ☐ Delete workspace before build starts
- ☐ Use secret text(s) or file(s)
- ☐ Provide Configuration files
- ☐ Add timestamps to the Console Output

Inject environment variables to the build process

Properties File Path

Properties Content

```
SEP_QA_URL = https://qa.sep.tdtm.cydeo.com/taws  
SEP_USERNAME = automation-user  
SEP_PASSWORD = 123abc
```

Script File Path

Script Content

Evaluated Groovy script

Groovy Script

Use Groovy Sandbox

Additional classpath

 Add entry

☐ Inject passwords to the build as environment variables

☐ Inspect build log for published build scans

Provide Node & npm bin/ folder to PATH

NodeJS Installation

Specify needed nodejs installation where npm installed packages will be provided to the PATH

npmrc file

Cache location

- ☐ Terminate a build if it's stuck
 - ☐ With Ant
-

Build Steps

Automate your build process with ordered tasks like code compilation, testing, and deployment.

Execute Windows batch command

Command

See [the list of available environment variables](#)

call npm install
call npm run test

Advanced 

 Add build step

Post-build Actions

Define what happens after a build completes, like sending notifications, archiving artifacts, or triggering other jobs.

Cucumber reports

Advanced 

 Edited

 Add post-build action
